

ABSTRACT OF THE DISCLOSURE

An apparatus body has a metal plate and a holding
portion detachably loaded with a PC card that includes
an antenna. The holding portion is provided at the
5 metal plate. The apparatus body is provided with
a connecting portion for data communication with the PC
card therein. The holding portion is arranged to hold
the PC card in a manner such that the antenna is
exposed outside of the holding portion and the minimum
10 distance between the antenna and the metal plate is
1 mm or more.
